Retraction

Retraction: Zhang et al. Revealing Cellular Heterogeneity and Key Regulatory Factors of Triple-Negative Breast Cancer through Single-Cell RNA Sequencing. Frontiers in Bioscience (Landmark Edition). 2024; 29: 290

Frontiers in Bioscience-Landmark Editorial Office

Published: 19 November 2026

The Editor-in-Chief has decided to retract the article entitled "Revealing Cellular Heterogeneity and Key Regulatory Factors of Triple-Negative Breast Cancer through Single-Cell RNA Sequencing" [1]. The retraction follows an investigation by the editorial office, during which the corresponding author, Xinna Du, acknowledged that the manuscript had originated from a paper mill. The involvement of a paper mill in the preparation of the manuscript constitutes a serious breach of research integrity and publication ethics and raises serious concerns about the authenticity and reliability of the research presented in the article.

All authors have agreed to the retraction. Our decision was made in accordance with the journal's Editorial Policy (https://www.imrpress.com/page/editorial-policies) and the COPE Retraction Guidelines (https://publicationethics.org/guidance/guideline/retraction-guidelines).

The retracted article will remain online to preserve the scholarly record, but every page will be digitally watermarked with the word "Retracted".

The Editor and Publisher of Frontiers in Bioscience-Landmark are committed to upholding the highest standards of research integrity and publication ethics and do not tolerate any form of research misconduct.
