

VISIT FUKUDA DENSHI AT ARTERY 2013

Fukuda Denshi will be attending Artery 2013 with their cardio-ankle vascular index technology, VaSera VS-1500N. The meeting is targeted at basic and clinical researchers as well as biomedical engineers working on arterial structure and function, providing the perfect platform for Fukuda Denshi to showcase this equipment.

Measuring a patient's cardio-ankle vascular index with the VaSera 1500N is quick and easy, and is not dependent on a qualified technician. Measurement can be undertaken by trained personnel, and a comprehensive report of the key parameters is available in less than 10 minutes, detailing the vascular age, the accumulation of coronary risks in the artery, and the effectiveness of therapies and modifications of lifestyle.

INNOVATIVE PAIN MANAGEMENT SYSTEM

Smiths Medical has launched a new edition of its CADD-Solis pain management system in the UK – version 3.0. This latest CADD-Solis Ambulatory Infusion System is the first infusion pump to offer programmed intermittent bolus delivery, combined with patient-controlled doses and continuous infusion in an integrated delivery system. The new customised system is designed to be easy to use and provide improved pain management.

The CADD-Solis pain management system with programmed intermittent bolus is indicated for intravenous patient-controlled analgesia, patient-controlled epidural analgesia, subcutaneous, epidurals, nerve blocks and surgical site infusion therapies.

C-ARM HELPS REDUCE WAITING TIMES

Nuffield Health Leeds Hospital has increased productivity within intra-operative imaging following installation of an Arcadis Varic C-arm from Siemens Healthcare. The Varic was selected for its excellent image quality, including 1024k x 1024k digital high resolution and high contrast imaging capabilities.

The system is helping staff to improve the workflow of spinal and neurological surgery procedures with its rapid screening times and versatile applications – it automatically transfers two-dimensional images in high resolution for surgical navigation and is well suited for advanced acquisition, viewing and archiving.

EXTENDED FLEXIBILITY IN LIVE CELL IMAGING

Extending the capabilities of the fully customisable IX3 inverted microscope frame, Olympus has expanded its range of compatible, interchangeable optical modules. Ease-of-use and accuracy are vastly improved via new motorised components, which also present a cost-efficient means to gradually upgrade to a fully motorised microscope system.

The IX3 series, with its unique 'open source' design offers a completely modular and flexible system. With a swappable deck design similar to a chest of drawers, optical modules are easily exchanged into the accessible infinite light path, moulding the IX3 microscope to the diverse requirements of the user.

Relevant contact details are given for each product.

ANSELL HEALTHCARE SUPPORTS SURGEONS

Ansell Healthcare, global leader in health-care barrier protective solutions, has launched a 3-year educational funding programme with the Royal College of Surgeons of England. The educational grant is part of Ansell's policy to support education initiatives and collaborating with the health-care community to increase the health and safety of professionals and patients alike.

By supporting the initiatives of the Department of Education of the Royal College of Surgeons of England, Ansell reaffirms its long-term commitment to the health-care community in general and the surgeons in particular.
