

ESM 1. Figure.

A) The estimated GAE (gallic acid equivalent, $\mu\text{g/ml}$) by calculation was also directly related to the lifespan extension at lower doses by PJ (black) or POMx (extract of pomegranate juice) (red). B) Correlation of estimated GAE with lower doses of PJ (black) and POMx (red) on the left. Correlation with higher doses of PJ that reduced lifespan and POMx that did not on the right.
